How to become a veterinary nurse assistant uk

If you love animals and you want a challenging and rewarding career, becoming a veterinary assistant might be the job for you. As a veterinary assistant, you will use all your skills to complete daily responsibilities with the ultimate goal of establishing and supporting pets' health and wellbeing. Capable veterinary assistants balance multiple duties and manage pet care and owners' expectations through their passion for animals and key personality traits ideal for the veterinary field. Career focused, distance education programs. Explore your opportunities to study Vet Assistant Courses here to find your next course. There are a variety of desired personality traits that every veterinary assistant should possess. Here are some of the essential qualities veterinarians look for in their assistants: Confidence - Veterinarian nurses must think fast and make quick decisions, meaning they need confidence in their abilities and skills. Often, nurses are assigned pet clients separate from the clinic's care team, and confidence in their ability to work with pets and their owners is vital to a successful career. Empathy - Pets are often brought to the vet clinic because they are injured, in pain, or ill. They can act out, and their owners may be overwrought with emotion. Veterinary assistants need to have empathy for the injured pet and its frightened owner. Being sympathetic will help both the pet you are working with and reassure the worried owner in the room. Resilience - Improving and even saving pets' lives are uplifting moments of a veterinary assistant's career. Unfortunately, some animals need to be euthanised, and others don't make it through surgery. These are difficult moments for an animal lover to witness, but a nurse or assistant needs to separate their feelings and do their job. Resiliency is necessary for you, the pet, and the pet's owner. Dedication - Veterinary assistants work long hours, especially when emergencies occur, and the work often involves many physical demands. Commitment to the job, even on the hardest days, will give you a sense of purpose. Patience - Vet clinics can be hectic, chaotic places at times, full of scared animals in pain and emotional owners. Nurses and assistants need to exercise patience at all times, no matter how busy things are and no matter how difficult a pet is acting. Other important qualities in a veterinary assistant include meticulousness, adaptability, respect, and creativity. What are the educational requirements in this field? You can become a veterinary assistant or nurse by taking coursework and graduating with a diploma in Pet Care/Vet Assistant from the International Career Institute. In less than a year, you can earn your degree and start your career. Graduates can choose from a variety of animal-related fields to work in, such as veterinary clinics, animal welfare organisations, wildlife parks and zoos, and veterinary pharmaceutical companies. Veterinary assistants and nurses need to enrol with the Royal College of Veterinary Surgeons, the veterinary regulatory body in the United Kingdom to legally participate in certain surgeries and procedures. What career progressions are available for a vet assistant? After becoming a veterinary assistant, you may want to know what career progressions are available if you wish to grow within this field. Applying to university and completing a veterinary degree, typically a 5-year process, will allow you to become a practising veterinarian. All veterinarians will need to register with the Royal College of Veterinary Surgeons. You may choose to work in a general veterinary practise or go back to university for advanced postgraduate degrees in specialties such as dermatology, acupuncture, or cardiology. Dedicating your career to research or teaching are other career avenues open to veterinarians. What are a vet assistant's role responsibilities? A veterinary assistant is responsible for a wide variety of role responsibilities. Some of the vital duties associated with this field are: Administering medications and vaccinations to pets Assisting with x-rays Preparing pets for surgery Booking appointments and answer calls Sterilising surgical instruments and medical equipment Applying bandages to fractures and wounds Keeping careful and accurate records Familiarising yourself with pets' information and notes from previous appointments Providing information and educating owners Giving feed, water, and fresh bedding to pets in your care Assisting with euthanasia Observing pets during and after surgery Giving medications and immunisations to animals Restraining animals during examinations, treatments, and operations Assisting veterinarians during surgery Responding to emergencies Cleaning and sanitising kennels, cages, exam and waiting rooms Exercising pets staying at the clinic These are standard duties that a nurse or assistant can deal with daily and that prevent the job from becoming predictable. Start your career in veterinary care with ICI UK Would you like to work with animals as a career? Do you have some of the qualities needed in a veterinary assistant? If this job appeals to you, visit the International Career Institute's website and learn about our Pet Care/Vet Assistant courses and diploma. Don't wait to make a difference in animals' lives. Enrol in ICI UK today and start building a career with purpose and meaning. There are two different pathways you can take to train as a veterinary nurse, either through vocational training or higher education. Veterinary nursing courses can be competitive so you'll need to meet their minimum entry requirements and be driven and passionate if you want to secure your place. With either route, you'll need to make sure your course is a Royal College of Veterinary Surgeons (RCVS) accredited veterinary nursing qualification. Approved programmes include a full-time period of practical nursing training in an approved training practice or practices. Student nurses must enrol with the RCVS to legally carry out some of the nursing procedures needed for their training. Once nurses are qualified and completed their necessary training hours, they will then be able to register with the RCVS as Registered Veterinary Nurses (RVNs). Work experience Work experience is vital if you are looking for a place on a course to become a veterinary nurse and is usually an entry requirement. The more experience you can get, the better! We recommend not only getting experience within a vet practice (ideally at an approved training practice) but in a variety of animal-related environments. For example, you could get experience at a cattery or kennel, rehoming centre or even a local farm or abattoir. It's also important for you to get experience because you'll learn more about what is required of you to do the role and whether you're suited to it. You could potentially be studying for four years or more and you want to enjoy the job for many years after that, so you need to be sure this is the career path for you! Of course, we know that studying hard to be a veterinary nurse is absolutely worth it. This is why we offer those studying to become a vet nurse voluntary work placements or 'Seeing Practice' (or Extra-Mural Studies/EMS) within our pet hospitals. If you'd like to train to become a veterinary nurse with FDSA, you need to join as one of our amazing Veterinary Care Assistants (VCAs) and pursue your training that way. Vocational qualifications What college courses are available to become a vet nurse? A vocational qualification is the quickest way to become an RVN. If you decide this is for you, you can complete a Level 3 Diploma in Veterinary Nursing, which can take as little as two years to complete full-time. You can do the Level 3 Diploma as an Advanced Apprenticeship alongside employment in a veterinary practice, or as a non-apprenticeship route. Through the Advanced Apprenticeship route, you'll 'earn while you learn' and sometimes employers will fund your course fees. A popular choice for people wanting to train as an RVN is to complete the Level 3 Diploma in Veterinary Nursing through a non-apprenticeship route. Practical work experience can be gained through employment or, more commonly, through a voluntary work placement. Your college will usually help students who aren't in employment find voluntary work placements with RCVS-accredited Training Practices. These vocational routes means you'll spend time both in a classroom (either as day-release or block placements) and working in practice. This is great if you do well in the working environment, plus you'll get plenty of hands-on experience so it's ideal for anyone looking to get stuck in straight away. However, you will have to balance academic demands with full-time work which (especially if you are on an Advanced Apprenticeship) could involve anti-social working hours or night-shift work. Where can I get my Level 3 Diploma in Veterinary Nursing? There are several RCVS-accredited further education colleges with courses in Veterinary Nursing across the country. Entry requirements will depend on the course you are studying and where you are studying, but minimum requirements are usually five GCSEs at at least grades C or 4, or five Scottish National 5s at grades A to C (or Standard Grades at grades one to three). Your qualifications must include English, Maths and a science subject. As the courses are quite competitive, it's essential to have work experience in practical veterinary work, too. Instead of going through a college, you can also apply directly for employment as a student or apprentice nurse with an RCVS-approved Training Practice to secure your apprenticeship placement with one of these practices. Can I upgrade my Level 3 Diploma to a degree? Once you have completed your Level 3 Diploma, it is possible to 'top up' your qualification to a full BSc honours degree through an additional course offered at universities. This can open the door to postgraduate opportunities in specialist areas, such as physiotherapy, behaviour, teaching or research. You can also further your skills and knowledge with a Graduate Diploma in Veterinary Nursing, which could lead to more responsibility in your field. Higher education Can I do a degree in veterinary nursing? Another pathway to becoming an RVN is through a higher education course. Several universities offer the opportunity to complete a Foundation Degree in Veterinary Nursing (FdSc), or a BA (Hons) in Veterinary Nursing. A degree will usually take three to four years to complete, so it's the slower of the two pathways. Degrees are more academically focussed, so more time will be spent learning the theory and developing in the classroom. But you will still need to complete the same minimum amount of practical work-experience on placements in approved training practices. This pathway is great for anyone who wants to experience university and gain a degree, which can open up different career paths or the possibility of further study. There are several RCVS-accredited degrees in veterinary nursing across the country. Each university's entry requirements will be different, so have a look on their websites to find out theirs. Often, you will need evidence of practical work experience in a veterinary setting, as well as specific A-Levels or equivalent qualifications. They are also very competitive, so be prepared to exceed the minimum requirements and show you're really passionate about becoming a veterinary nurse. An advantage of taking this pathway is that you have a more structured approach to learning and often have more time to balance the demands of study against placement work. There are also postgraduate opportunities available for nurses who wish to move into a specialist area, such as physiotherapy, with this route. Funding my qualification
